# Subject Index of Volumes 167

AA3105
Microdefects formation during the twin-roll casting of Al–Mg–Mn aluminium alloys, 62
Active control
Improving surface roughness in turning using optimal control of tool's radial position, 54
Adaptive meshing
Computer simulation of single-point diamond turning using finite element method, 549
$Al_2O_3$
The structure and functional properties of PVD and CVD coated $Al_2O_3$ + $ZrO_2$ oxide tool ceramics, 438
Alloy 718
Microstructure and tensile properties of Inconel 718 pulsed Nd-YAG laser welds, 73
Aluminium alloy
Microdefects formation during the twin-roll casting of Al–Mg–Mn aluminium alloys, 62
Investigation into the forming of a complex cup locally constrained by a round die based on an innovative hydromechanical deep drawing method, 191
Enhancing the formability of aluminium components via temperature controlled hydroforming, 363
Computer aided classification of flaws occurred during casting of aluminum, 456
Aluminum
3D modeling of shear-slitting process for aluminum alloys, 91
ANN
Investigation on Ti6Al4V laser welding using statistical and Taguchi approaches, 422
Annealing
Evolution of textures in interstitial free steel during multiple cold rolling and annealing, 132
Aspheric generation
The novel bondless wheel, spherical glass chips and a new method of aspheric generation, 184
Automation
Recent development in micro-handling systems for micro-manufacturing, 499
Axial elongation
Process analysis software for the prediction of elongation with respect to the draw bending of small diameter thin walled tubing, 41

Back-up
The path towards delamination-free drilling of composite materials, 251
Bar rolling
Process design for refinement and homogenization of microstructure in bar rolling, 273
Bench-type ultraprecision machines
Design of ultraprecision machine tools with applications to manufacture of miniature and micro components, 515
Bending
Free-Bending—A new bending technique in the hydroforming process chain, 302
Biaxial testing
Specimen for a novel concept of the biaxial tension test, 177
Bi-directional
A study on the bi-directional springback of sheet metal stamping, 33
Blank holding
Recent developments in friction-assisted sheet metal forming processes, 161
Blank shapes
Numerical determination of blank shapes for warm forming of non-axisymmetric components, 472
Bondless diamond wheels
The novel bondless wheel, spherical glass chips and a new method of aspheric generation, 184
Burnishing
Some surface characteristics due to center rest ball burnishing, 47
Burr
3D modeling of shear-slitting process for aluminum alloys, 91
Butt joint weld
Effects of welding speed, energy input and heat source distribution on temperature variations in butt joint welding, 393

Carbon nanofibers
Novel nanocomposites and nanoceramics based on polymer nanofibers using electrospinning process—A review, 283
Carbon nanotubes
Novel nanocomposites and nanoceramics based on polymer nanofibers using electrospinning process—A review, 283
Nanomanipulation in a scanning electron microscope, 371
Cast defects
Computer aided classification of flaws occurred during casting of aluminum, 456
Casting defect
Microdefects formation during the twin-roll casting of Al–Mg–Mn aluminium alloys, 62
Center rest
Some surface characteristics due to center rest ball burnishing, 47
Chip formation
Finite element investigation of the flow stress dependence of chip formation, 1
Computer simulation of single-point diamond turning using finite element method, 549
Chip surface temperature
Comparison of chip surface temperature between up and down milling orientations in high speed rough milling of hardened steel, 110

Elsevier B.V.
doi:10.1016/S0924-0136(05)00717-X

$CO_2$ laser
Investigation on Ti6Al4V laser welding using statistical and Taguchi approaches, 422
Cold rolling reduction
Evolution of textures in interstitial free steel during multiple cold rolling and annealing, 132
Collar drawing
Recent developments in friction-assisted sheet metal forming processes, 161
Composite materials
Optimisation of wind turbine blades, 463
Computer-aided engineering
Dynamic reverse compensation to increase the accuracy of the rapid prototyping system, 167
Conrods
Modelling the forging and post-forging cooling of C70S6 conrods, 529
Constitutive model
A constitutive model for the metals subjected to thermomechanical loading with fast heating during heating-assisted forming, 244
Continuous casting
Microdefects formation during the twin-roll casting of Al–Mg–Mn aluminium alloys, 62
Improvement of the temperature distribution in continuous casting moulds through the rearrangement of the cooling water slots, 508
Continuous cold rolling
Dynamic thickness simulation of five-stand continuous cold rolling, 218
Cooling
Modelling the forging and post-forging cooling of C70S6 conrods, 529
Coupled thermal–mechanical FE analysis
Improvement of the temperature distribution in continuous casting moulds through the rearrangement of the cooling water slots, 508
Cr–N coatings
Recent advances in the chromium nitride PVD process for forming and machining surface protection, 415
Crystal plasticity
A personal reflection of mesoplasticity and its applications, 151
Curl distortion
Dynamic reverse compensation to increase the accuracy of the rapid prototyping system, 167
CVD
The structure and functional properties of PVD and CVD coated $Al_2O_3 + ZrO_2$ oxide tool ceramics, 438

Damage models
3D modeling of shear-slitting process for aluminum alloys, 91
Damage
A constitutive model for the metals subjected to thermomechanical loading with fast heating during heating-assisted forming, 244
Debonding
Prediction for debonding damage process of glass beads-reinforced modified polyphenylene oxide under simple shear, 429
Deep drawing
Recent developments in friction-assisted sheet metal forming processes, 161
Delamination
The path towards delamination-free drilling of composite materials, 251
Die and mould making
Machining of micro/miniature dies and moulds by electrical discharge machining—Recent development, 488
Diode laser
Investigation on Ti6Al4V laser welding using statistical and Taguchi approaches, 422
Double cold rolling
Evolution of textures in interstitial free steel during multiple cold rolling and annealing, 132
Drilling
The path towards delamination-free drilling of composite materials, 251
Dry cut
Mean flank temperature measurement in high speed dry cutting of magnesium alloy, 119
Dynamic simulation
Dynamic thickness simulation of five-stand continuous cold rolling, 218

ECDM
New developments in the process control of the hybrid electro chemical discharge machining (ECDM) process, 338
Electron beam
Fusion zone during focused electron-beam welding, 265
Electrospinning process
Novel nanocomposites and nanoceramics based on polymer nanofibers using electrospinning process—A review, 283
En 8 steel
Characterization of dry sliding wear resistance of laser surface hardened En 8 steel, 83

FE-analysis
Enhancing the formability of aluminium components via temperature controlled hydroforming, 363
FEM simulations
3D modeling of shear-slitting process for aluminum alloys, 91
Influence of material properties on the laser-forming process of sheet metals, 124
Prediction of wear in hot forging tools by means of finite-element-analysis, 309
FEM
A study on the bi-directional springback of sheet metal stamping, 33
Free-Bending—A new bending technique in the hydroforming process chain, 302
FE-simulation
Specimen for a novel concept of the biaxial tension test, 177
Finite element analysis
Optimisation of wind turbine blades, 463
Finite element method
Dynamic reverse compensation to increase the accuracy of the rapid prototyping system, 167
Numerical simulation of thermally induced workpiece deformation in turning when using various cutting fluid applications, 408
Computer simulation of single-point diamond turning using finite element method, 549
Effects of welding speed, energy input and heat source distribution on temperature variations in butt joint welding, 393
Finite element simulation
Finite element investigation of the flow stress dependence of chip formation, 1
Finite element
Residual stress simulation in welded sections of P91 pipes, 480
Flange
Precision forming of flange for a large special vessel, 224
Flash
Numerical determination of blank shapes for warm forming of non-axisymmetric components, 472

Flow forming
Effects of roller path and geometry on the flow forming of solid cylindrical components, 344
Flow stress law
Finite element investigation of the flow stress dependence of chip formation, 1
Flow stress
Numerical determination of blank shapes for warm forming of non-axisymmetric components, 472
Focusing characteristics
Fusion zone during focused electron-beam welding, 265
Forging
Modelling the forging and post-forging cooling of C70S6 conrods, 529
Forming process
Controlled strain path forming process with space variant blank holder force using RSM method, 447
Forming sequences
Forming of hollow gear-shafts with pressure-assisted injection forging (PAIF), 294
Forming
Laser applications in microtechnology, 494
Forming-limits
Forming of hollow gear-shafts with pressure-assisted injection forging (PAIF), 294
Free-Bending
Free-Bending—A new bending technique in the hydroforming process chain, 302
Friction assisted
Recent developments in friction-assisted sheet metal forming processes, 161
Fusion zone
Fusion zone during focused electron-beam welding, 265

Gear-shafts
Forming of hollow gear-shafts with pressure-assisted injection forging (PAIF), 294
Geometric variables
Numerical determination of blank shapes for warm forming of non-axisymmetric components, 472
Grain refinement
Process design for refinement and homogenization of microstructure in bar rolling, 273

Hardened steel
Comparison of chip surface temperature between up and down milling orientations in high speed rough milling of hardened steel, 110
Head mounted display
A new hybrid dynamic modelling approach for process planning, 22
Heating-assisted forming
A constitutive model for the metals subjected to thermomechanical loading with fast heating during heating-assisted forming, 244
High speed machining
A review of micro and nanomachining from a materials perspective, 316
High speed rough milling
Comparison of chip surface temperature between up and down milling orientations in high speed rough milling of hardened steel, 110
Hot forging
Prediction of wear in hot forging tools by means of finite-element-analysis, 309
Hot forming
Modelling of microstructure evolution in hot forming using unified constitutive equations, 354
Hydroforming
Enhancing the formability of aluminium components via temperature controlled hydroforming, 363
Research and advances in fundamentals and industrial applications of hydroforming, 383
Hydromechanical deep drawing (HDD) with uniform pressure onto the blank
Investigation into the forming of a complex cup locally constrained by a round die based on an innovative hydromechanical deep drawing method, 191

IF steel
Evolution of textures in interstitial free steel during multiple cold rolling and annealing, 132
IHBF
Progress in shell hydroforming, 230
Images analysis
Computer aided classification of flaws occurred during casting of aluminum, 456
In situ scanning electron microscopy (SEM)
Prediction for debonding damage process of glass beads-reinforced modified polyphenylene oxide under simple shear, 429
Incremental forming
Effects of roller path and geometry on the flow forming of solid cylindrical components, 344
Inverse problem
Thermal conductivity investigation for upsetting with a procedure of combining inverse model and the proposed regularization of Tikhonov method, 208

Joining
Laser applications in microtechnology, 494

Kalman filtering
Improving surface roughness in turning using optimal control of tool's radial position, 54

Laser forming
Influence of material properties on the laser-forming process of sheet metals, 124
Laser hardening
Characterization of dry sliding wear resistance of laser surface hardened En 8 steel, 83
Laser welding
Microstructure and tensile properties of Inconel 718 pulsed Nd-YAG laser welds, 73
Laser
Laser applications in microtechnology, 494
Latex binder
Study of the effect of latex binder on the green and fired properties of ZnO varistor discs and estimation of Weibull parameters, 542
Laves phase
Microstructure and tensile properties of Inconel 718 pulsed Nd-YAG laser welds, 73
Limit strains
A personal reflection of mesoplasticity and its applications, 151
Local thermal inconsistency
A constitutive model for the metals subjected to thermomechanical loading with fast heating during heating-assisted forming, 244
"Self-supporting" ceramic mold
Microstructure and mechanical properties of precision cast TiAl turbocharger wheel, 14

Machines
Research and advances in fundamentals and industrial applications of hydroforming, 383

Machining theory
A review of micro and nanomachining from a materials perspective, 316
Machining
Finite element investigation of the flow stress dependence of chip formation, 1
Macroplasticity
A personal reflection of mesoplasticity and its applications, 151
Magnesium alloy
Mean flank temperature measurement in high speed dry cutting of magnesium alloy, 119
Manufacturing technology
Micro milling of sintered tungsten–copper composite materials, 402
Material properties
Influence of material properties on the laser-forming process of sheet metals, 124
Materials modelling
Modelling of microstructure evolution in hot forming using unified constitutive equations, 354
Mean flank temperature
Mean flank temperature measurement in high speed dry cutting of magnesium alloy, 119
Meso machine tools
A review of micro and nanomachining from a materials perspective, 316
Mesoplasticity
A personal reflection of mesoplasticity and its applications, 151
3D microstructures and devices
Design of ultraprecision machine tools with applications to manufacture of miniature and micro components, 515
Micro milling
Micro milling of sintered tungsten–copper composite materials, 402
Micro-cutting force variation
A personal reflection of mesoplasticity and its applications, 151
Micro-electrical discharge machining
Machining of micro/miniature dies and moulds by electrical discharge machining—Recent development, 488
Microgripper
Nanomanipulation in a scanning electron microscope, 371
Micro-handling systems
Recent development in micro-handling systems for micro-manufacturing, 499
Microinjection moulding
Micromilling of hardened tool steel for mould making applications, 201
Micromachining
A review of micro and nanomachining from a materials perspective, 316
Micro-manufacturing
Machining of micro/miniature dies and moulds by electrical discharge machining—Recent development, 488
Micromilling
Micromilling of hardened tool steel for mould making applications, 201
Micro-parts
Recent development in micro-handling systems for micro-manufacturing, 499
Micro-plastic deformation
Ultra-precision machining induced micro-plastic deformation in Zn–Al based alloy, 536
Microstructure evolution
Process design for refinement and homogenization of microstructure in bar rolling, 273
Modelling of microstructure evolution in hot forming using unified constitutive equations, 354
Microstructure
Microstructure and mechanical properties of precision cast TiAl turbocharger wheel, 14
Modelling the forging and post-forging cooling of C70S6 conrods, 529
Microtechnology
Laser applications in microtechnology, 494
Miniature and micro components manufacturing
Design of ultraprecision machine tools with applications to manufacture of miniature and micro components, 515
Monte Carlo method
Optimization of stamping processes aiming at maximal process stability, 237
Mould design
Improvement of the temperature distribution in continuous casting moulds through the rearrangement of the cooling water slots, 508
Multifunctional machine tool
Precision forming of flange for a large special vessel, 224

Nanoceramics
Novel nanocomposites and nanoceramics based on polymer nanofibers using electrospinning process—A review, 283
Nanocomposites
Novel nanocomposites and nanoceramics based on polymer nanofibers using electrospinning process—A review, 283
Nanomachining
A review of micro and nanomachining from a materials perspective, 316
Nanomanipulation
Nanomanipulation in a scanning electron microscope, 371
Nanotools
Nanomanipulation in a scanning electron microscope, 371
Nb segregation
Microstructure and tensile properties of Inconel 718 pulsed Nd-YAG laser welds, 73
Net-shape forming of hypereutectic Al–Si alloy
A novel method for net-shape forming of hypereutectic Al–Si alloys by thixocasting with powder preforms, 103
Neural networks
Computer aided classification of flaws occurred during casting of aluminum, 456
Non-traditional
The path towards delamination-free drilling of composite materials, 251

Optimal control
Improving surface roughness in turning using optimal control of tool's radial position, 54
Optimisation
Optimisation of wind turbine blades, 463
Optimization
Optimization of stamping processes aiming at maximal process stability, 237
Orientations
Comparison of chip surface temperature between up and down milling orientations in high speed rough milling of hardened steel, 110
Origin of M–K groove
A personal reflection of mesoplasticity and its applications, 151
Oxide ceramics
The structure and functional properties of PVD and CVD coated $Al_2O_3$ + $ZrO_2$ oxide tool ceramics, 438

P91 pipes
Residual stress simulation in welded sections of P91 pipes, 480

Particulate polymer composites
Prediction for debonding damage process of glass beads-reinforced modified polyphenylene oxide under simple shear, 429
Phase transformation
Ultra-precision machining induced micro-plastic deformation in Zn–Al based alloy, 536
Pilot hole
The path towards delamination-free drilling of composite materials, 251
Polymer nanofibers
Novel nanocomposites and nanoceramics based on polymer nanofibers using electrospinning process—A review, 283
Post-weld heat treatments
Microstructure and tensile properties of Inconel 718 pulsed Nd-YAG laser welds, 73
Powder compaction
Study of the effect of latex binder on the green and fired properties of ZnO varistor discs and estimation of Weibull parameters, 542
Powder preform
A novel method for net-shape forming of hypereutectic Al–Si alloys by thixocasting with powder preforms, 103
Precision bending
Precision forming of flange for a large special vessel, 224
Precision casting
Microstructure and mechanical properties of precision cast TiAl turbocharger wheel, 14
Precision forming
Precision forming of flange for a large special vessel, 224
Precision welding
Precision forming of flange for a large special vessel, 224
Preforming
Progress in shell hydroforming, 230
Pressure-assisted injection forging
Forming of hollow gear-shafts with pressure-assisted injection forging (PAIF), 294
Process control
New developments in the process control of the hybrid electro chemical discharge machining (ECDM) process, 338
Process design
Process design for refinement and homogenization of microstructure in bar rolling, 273
Process downscaling
Micromilling of hardened tool steel for mould making applications, 201
Process plan
A new hybrid dynamic modelling approach for process planning, 22
Processing window
Microstructure and mechanical properties of precision cast TiAl turbocharger wheel, 14
Production process
Numerical simulation of thermally induced workpiece deformation in turning when using various cutting fluid applications, 408
PVD
The structure and functional properties of PVD and CVD coated $Al_2O_3$ + $ZrO_2$ oxide tool ceramics, 438

Rapid prototyping
Dynamic reverse compensation to increase the accuracy of the rapid prototyping system, 167
Real time control
New developments in the process control of the hybrid electro chemical discharge machining (ECDM) process, 338
Recrystallization
A personal reflection of mesoplasticity and its applications, 151
Redrawing
Recent developments in friction-assisted sheet metal forming processes, 161
Regularization of the Tikhonov method
Thermal conductivity investigation for upsetting with a procedure of combining inverse model and the proposed regularization of Tikhonov method, 208
Residual stresses
Residual stress simulation in welded sections of P91 pipes, 480
Response surface methodology
Optimization of stamping processes aiming at maximal process stability, 237
Controlled strain path forming process with space variant blank holder force using RSM method, 447
Roller tool
Effects of roller path and geometry on the flow forming of solid cylindrical components, 344
Rolling texture
Evolution of textures in interstitial free steel during multiple cold rolling and annealing, 132
Round edge cutting tool model
Computer simulation of single-point diamond turning using finite element method, 549

Scanning electron microscope
Nanomanipulation in a scanning electron microscope, 371
Semi-solid metal forming
A novel method for net-shape forming of hypereutectic Al–Si alloys by thixocasting with powder preforms, 103
Shear band
A personal reflection of mesoplasticity and its applications, 151
Shear damage
Prediction for debonding damage process of glass beads-reinforced modified polyphenylene oxide under simple shear, 429
Shear slitting
3D modeling of shear-slitting process for aluminum alloys, 91
Sheet hydroforming
Investigation into the forming of a complex cup locally constrained by a round die based on an innovative hydromechanical deep drawing method, 191
Sheet metal forming
Recent developments in friction-assisted sheet metal forming processes, 161
Sheet metal
A study on the bi-directional springback of sheet metal stamping, 33
Influence of material properties on the laser-forming process of sheet metals, 124
Specimen for a novel concept of the biaxial tension test, 177
Shell hydrobulging
Progress in shell hydroforming, 230
Shop floor
A new hybrid dynamic modelling approach for process planning, 22
Simulation
A new hybrid dynamic modelling approach for process planning, 22
Investigation into the forming of a complex cup locally constrained by a round die based on an innovative hydromechanical deep drawing method, 191
Free-Bending—A new bending technique in the hydroforming process chain, 302
Computer simulation of single-point diamond turning using finite element method, 549
Single point diamond turning
A personal reflection of mesoplasticity and its applications, 151

Single-point diamond turning
Computer simulation of single-point diamond turning using finite element method, 549
Size effects
Micromilling of hardened tool steel for mould making applications, 201
Space variant blank holder force
Controlled strain path forming process with space variant blank holder force using RSM method, 447
Special drill
The path towards delamination-free drilling of composite materials, 251
Spherical glass chips
The novel bondless wheel, spherical glass chips and a new method of aspheric generation, 184
Springback
A study on the bi-directional springback of sheet metal stamping, 33
Process analysis software for the prediction of elongation with respect to the draw bending of small diameter thin walled tubing, 41
Stability
Optimization of stamping processes aiming at maximal process stability, 237
Stamping
A study on the bi-directional springback of sheet metal stamping, 33
Optimization of stamping processes aiming at maximal process stability, 237
Standards
Recent development in micro-handling systems for micro-manufacturing, 499
Stereolithography
Dynamic reverse compensation to increase the accuracy of the rapid prototyping system, 167
Stochastic cutting process
Improving surface roughness in turning using optimal control of tool's radial position, 54
Strain path
A personal reflection of mesoplasticity and its applications, 151
Structuring
Laser applications in microtechnology, 494
Surface roughness
Some surface characteristics due to center rest ball burnishing, 47
Improving surface roughness in turning using optimal control of tool's radial position, 54
Surface roundness
Some surface characteristics due to center rest ball burnishing, 47
Surface treatments
Recent advances in the chromium nitride PVD process for forming and machining surface protection, 415

Taguchi DOE
Investigation on Ti6Al4V laser welding using statistical and Taguchi approaches, 422
Technological science
Computer aided classification of flaws occurred during casting of aluminum, 456
Temperature distribution
Improvement of the temperature distribution in continuous casting moulds through the rearrangement of the cooling water slots, 508
Tensile properties
Microstructure and mechanical properties of precision cast TiAl turbocharger wheel, 14
Thermal conductivity
Thermal conductivity investigation for upsetting with a procedure of combining inverse model and the proposed regularization of Tikhonov method, 208
Thermal deformation
Numerical simulation of thermally induced workpiece deformation in turning when using various cutting fluid applications, 408
Thermal hydroforming
Enhancing the formability of aluminium components via temperature controlled hydroforming, 363
Thermomechanical properties
A constitutive model for the metals subjected to thermomechanical loading with fast heating during heating-assisted forming, 244
Thickness thinning
Progress in shell hydroforming, 230
Thickness
Dynamic thickness simulation of five-stand continuous cold rolling, 218
Thin-walled tubes
Process analysis software for the prediction of elongation with respect to the draw bending of small diameter thin walled tubing, 41
Thixocasting
A novel method for net-shape forming of hypereutectic Al–Si alloys by thixocasting with powder preforms, 103
Thrust force
The path towards delamination-free drilling of composite materials, 251
Ti6Al4V
Investigation on Ti6Al4V laser welding using statistical and Taguchi approaches, 422
TiAl
Microstructure and mechanical properties of precision cast TiAl turbocharger wheel, 14
Tool wear
Prediction of wear in hot forging tools by means of finite-element-analysis, 309
A review of micro and nanomachining from a materials perspective, 316
Tools
Research and advances in fundamentals and industrial applications of hydroforming, 383
Transformation hardening
Characterization of dry sliding wear resistance of laser surface hardened En 8 steel, 83
Transient temperature history
Effects of welding speed, energy input and heat source distribution on temperature variations in butt joint welding, 393
Tribology
Recent advances in the chromium nitride PVD process for forming and machining surface protection, 415
Tubular components
Forming of hollow gear-shafts with pressure-assisted injection forging (PAIF), 294
Tungsten–copper
Micro milling of sintered tungsten–copper composite materials, 402

Ultraprecision machines design
Design of ultraprecision machine tools with applications to manufacture of miniature and micro components, 515
Ultraprecision machining
Design of ultraprecision machine tools with applications to manufacture of miniature and micro components, 515
Ultra-precision machining
Ultra-precision machining induced micro-plastic deformation in Zn–Al based alloy, 536

Unified constitutive equations
Modelling of microstructure evolution in hot forming using unified constitutive equations, 354
Upsetting
Thermal conductivity investigation for upsetting with a procedure of combining inverse model and the proposed regularization of Tikhonov method, 208

Virtual reality
A new hybrid dynamic modelling approach for process planning, 22
Visual control
Nanomanipulation in a scanning electron microscope, 371

Warm forming
Numerical determination of blank shapes for warm forming of non-axisymmetric components, 472
Warm hydroforming
Research and advances in fundamentals and industrial applications of hydroforming, 383
Wear resistance
Characterization of dry sliding wear resistance of laser surface hardened En 8 steel, 83
Wear
The structure and functional properties of PVD and CVD coated $Al_2O_3$ + $ZrO_2$ oxide tool ceramics, 438
Weibull parameters
Study of the effect of latex binder on the green and fired properties of ZnO varistor discs and estimation of Weibull parameters, 542
Welding heat source
Effects of welding speed, energy input and heat source distribution on temperature variations in butt joint welding, 393
Welding
Investigation on Ti6Al4V laser welding using statistical and Taguchi approaches, 422
Welds
Residual stress simulation in welded sections of P91 pipes, 480
Wind turbine blade
Optimisation of wind turbine blades, 463
Wrinkling
Progress in shell hydroforming, 230

Zn–Al alloys
Ultra-precision machining induced micro-plastic deformation in Zn–Al based alloy, 536
ZnO varistor disc
Study of the effect of latex binder on the green and fired properties of ZnO varistor discs and estimation of Weibull parameters, 542
$ZrO_2$
The structure and functional properties of PVD and CVD coated $Al_2O_3$ + $ZrO_2$ oxide tool ceramics, 438
